Introduction

Car Communications is a leading installer of fully fitted hands-free kits and in-vehicle communication solutions.

We provide a Northern Ireland wide installation service direct to business and the public, as well as to all the major mobile phone networks.

We have been supplying and installing professional hands-free Kits and in-vehicle accessories since 2001, and have recently extended our product line to include retro-fit parking sensors, GPS Tracking Systems, Taxi Metering and iPod integration.

All our installations use genuine accessories manufactured by market leaders like Nokia, Motorola, Sony Ericsson, THB BURY, Parrot and Cobra.

FCS Approved Silver Award

Since 2004 we have been a chartered member of the Radio Communications Quality Council Silver Award Scheme, and have agreed to abide by the rules of the scheme as specified by the FCS (Federation of Communications Services).

All our work is carried out to MPT 1632 code of practice and is fully warranted for 12 months.

We can also provide full ADR Certification in compliance with UK and European regulations and codes of practice for hands-free kits, 2-way radios, telematics and most other communications equipment used in the petrochemical industry

Hands Free Car Kits

Car Communications offers the very latest in mobile phone car kit technology

With many years experience installing hands-free kits and in-vehicle accessories, we certainly have the knowledge and skill to give you a factory fitted, professional finish.

All our hands-free car kit installations are carried out at a time and location convenient to you.

Our installations are completed to the industry standard MPT 1362 by fully qualified and insured engineers and every installation comes as standard with a full 12 month warranty.

All installations are damage-free, visible wire-free and future-proof. We only use genuine products to ensure maximum signal strength and call quality.

Nokia Advanced Car Kit CK-7W

The Nokia Advanced Car Kit offers convenient, user-friendly hands-free communication on the go.

It works wirelessly using Bluetooth wireless technology or with a wired Pop-Port connector.

Mobile phones equipped with Bluetooth wireless technology can establish a wireless connection with the car kit. Once it's paired with your phone, the kit automatically activates the connection when you start the ignition.

It can also be connected with a mobile phone holder, providing compatibility with a broad range of mobile phones.

Simply put your compatible phone into the holder mounted in the vehicle and the advanced car kit takes over your communications. The mobile phone holder will also charge your phone so you can have a fully powered battery when you are ready to leave the vehicle.

Nokia CK7W

Parrott Bluetooth Car Kit CK 3100

The Parrot CK3100 is the most advanced hands-free car kit on the market. With the Parrot CK3100, you can place and receive calls in comfort and safety, without ever touching your mobile phone.

The wireless connection between the CK3100 and the Bluetooth phone and its voice recognition system is enabled as long as the phone is turned on.

The Parrot CK3100 Bluetooth hands-free car kit offers the facility to provide drivers with visual information and functions that they routinely use from their personal phone. The display on the Parrot CK3100 will show the phonebook, carrier signal strength, last calls received and call ID information when a call is received.

We also offer a full range of accessories to enhance your installation further such as the no-hole bracket or even the leather console for that quality look and feel.

If you are unsure about which type will best meet your needs, please contact us and one of our hands-free kit specialists will advise you how to stay safe and on the right side of the law, and avoid those costly points and fines!

ipod integration

Parking Sensors

ParkMaster from Cobra is an innovative new reverse parking aid that helps to protect vehicles, as well as helping to prevent injury to pedestrians, property, pets and playing children.

It is often impossible to judge how much room is available when reversing into a parking space, especially in vehicles with restricted rear vision.

ParkMaster automatically creates an invisible detection zone immediately on selecting reverse gear. As the vehicle is reversed towards an obstacle, ParkMaster's audio signal emits an audible warning, which increases in frequency until the tone becomes continuous at 30cm.

ParkMaster is now available as an unobtrusive retrofit option, visible only as a row of four neat sensors located on the rear bumper. These can even be colour coded if required.

Many leading manufacturers fit ParkMaster as original factory equipment.

Taxi Meters

Car Communications offer a range of taxi metering and communication systems for taxi companies, catering for every specification from the owner-driver to the fleet operator.

All our systems are industry proven and are used by some of the biggest and most technologically advanced taxi companies in the world.

We are able to offer complete communication and fleet management systems for Taxi companies including:

- **Taximeters and data terminals**
- **Integrated printers**
- **Credit Card POS management**
- **Fully integrated GPS systems**
- **Electronic tachographs**
- **Black box systems**

We offer a full supply, installation and calibration service for all our product ranges.

FT82856

GPS Tracking Systems

Car Communications can offer you advice and unbeatable value on our range of GPS vehicle tracking solutions to help prevent your vehicle from being stolen, track its usage or indeed assist in its recovery in the event of its theft.

The system is fitted securely to your vehicle, and constantly monitors its position via the satellites that orbit the earth.

This information is stored in a small data storage unit within the vehicle. The data can then be uploaded over the cellular data network at any time to your computer using the easy-to-use bundled software.

The unique features of our mainline system are:

No annual subscriptions or hidden fees

Pay as You Go tracking using your own SIM card so you control costs

Web based global maps enabling you to track worldwide (GPS permitting)

90 day long-life battery leaves the unit truly flexible

Free UK support

Satellite Navigation Systems

Car Communications have selected a range of the very latest and most advanced navigation products on the market to help guide you simply and effectively from door to door.

We have carefully selected our products so they are the most user-friendly navigation units available. You can search and plan a route to your destination by simply keying in a simple street name, town, city or even just the postcode.

Our products use only the highest quality software and are manufactured using highest quality materials.

Any satellite navigation system is only as good as its mapping software and that's why our systems come complete with full UK and Ireland street level mapping free of charge, ensuring that you can travel from A to B using the best route possible and more importantly, without getting you lost!
